WHO THE PAPER IS FOR

This document is intended to be a resource for people who are exposed to second-hand smoke (SHS) in their home that is part of a multi-unit dwelling (MUD), building owners/landlords who want to know their rights regarding restricting smoking on their property, and for public health staff who respond to complaints about drifting smoke. This resource provides a thorough analysis of all aspects of the issue, from why second-hand smoke is a health concern to what you can do about it. The document is divided into four parts:

- Part 1 provides an overview of the issue of drifting second-hand smoke.
- Part 2 explores the science of second-hand smoke and its effects on the body.
- Part 3 contains a range of options for action:
 - 3(A) Options for tenants
 - 3(B) Options for condominium owners
 - 3(C) Options for landlords and condominium associations
- Part 4 summarizes and gives links to the key provincial/territorial laws that have a bearing on the issue, as well as providing contact information for the government and non-governmental organizations that deal with landlord-tenant issues.

The issue of drifting second-hand smoke in MUDs is gaining prominence as society learns more about the dangers of exposure to SHS and as more public places become smoke-free. Many Canadians can now go out and enjoy smoke-free experiences in bars, restaurants, and many other public places, only to be unwillingly exposed to polluted air at home. Although there are currently no laws that explicitly prohibit people from smoking in their own apartment or condominium, there is nonetheless a range of possible remedies for people faced with tobacco smoke drifting into their residences.

A MUD is defined as any type of building containing more than one residential unit, and includes:

- Multi-storey apartment buildings
- Condominiums
- Townhouses
- Duplexes
- Semi-detached houses
- Houses partitioned into apartment units
- Basement suites

For simplicity, the term “drifting smoke” will be used to refer to tobacco smoke that drifts or seeps into a residential unit from various sources:

- Through open windows or doors (from a neighbour’s patio or balcony or from outdoor common areas)
- Through electrical outlets, cable or phone jacks, ceiling fixtures
- Through cracks and gaps around sinks, countertops, windows, doors, floors, walls, ceilings
- Through the ventilation system.

Great strides have been made in protecting people from the hazards of SHS in the public domain. Most provinces and territories now have laws in place to protect people from exposure in indoor workplaces and in most enclosed public places, including shopping malls, hospitals, banks, on public transit, and even in restaurants and bars. Some of these laws and numerous municipal bylaws also ban smoking in the common areas of apartment buildings and condominiums, such as hallways, stairwells, laundry rooms, corridors and passageways. However, to date no legislative body in Canada has been prepared to specifically address the issue of adults smoking in their own homes, regardless of whether the smoke affects other people. Drifting SHS in MUDs is a serious health hazard for many. In the absence of voluntary measures from tenants and landlords, the need increases for tribunals, courts, and lawmakers to address the issue.

MAGNITUDE OF THE PROBLEM

With very little data on drifting SHS in MUDs available at present, it is difficult to know exactly how many Canadians are affected. What is known is that 15% of Canadian homes have at least one person who smokes daily or almost daily.¹ Of these households, 40% have some sort of restrictions in place,² such as limiting smoking to certain rooms (50%), abstaining from smoking inside (21%), or opening windows to increase ventilation (17%).³ The 2005 Canadian Tobacco Use Monitoring Survey (CTUMS) also reports that 9% of children under the age of 12 (approx. 380,000 children) are regularly exposed to second-hand smoke in the home.⁴ However, it should be noted that these numbers do not specify type of residence, nor do they separate children who actually live in the same residence as a smoker from children exposed to drifting smoke.

Additional data indicate that:

- One third of Canadian households are renters⁵
- A strong correlation exists between home ownership and net worth (i.e. a higher proportion of renters have lower socioeconomic status)⁶
- Smoking rates are inversely related to income (i.e. higher smoking rates are found among those with lower socioeconomic status)⁷

It is expected that the actual number of people exposed to drifting SHS is probably higher than the 15% of homes with a smoker reported by CTUMS. Finally, we are aware of two provincial polls (BC, ON) addressing drifting second-hand smoke in MUDs, although their results have not been officially released. However, some general key findings from those polls indicate that:

- People are definitely bothered by drifting SHS in their own homes, but very few feel empowered to actually do anything about it (like talk to the landlord)
- There is a strong belief that people have the right to smoke a legal substance in their own homes
- Some people have indicated that they would be willing to pay more money to live in a smoke-free building

A QUESTION OF RIGHTS

Fighting for the right to breathe clean air in your own apartment or condominium can be a confusing undertaking with no clear path to success. On this issue, some would argue that tobacco control crosses the line by infringing on the rights of smokers in their own homes. For as non-smokers have enjoyed increasingly more smoke-free workplaces and public places, some smokers have perceived their rights as being trampled upon. On this issue of rights, it is important to clarify which pieces of legislation have a bearing.

The *Canadian Charter of Rights and Freedoms*

The *Canadian Charter of Rights and Freedoms* is a bill of rights entrenched in the Constitution of Canada. It forms the first part of the *Constitution Act, 1982*, and is intended to protect certain political and civil rights of people in Canada from the policies and actions of all levels of government. The Charter only applies to government laws and actions (including the laws and actions of federal, provincial, and municipal governments and public school boards), not to private activity.⁸ Contrary to the claims of various smokers' rights groups, the *Canadian Charter of Rights and Freedoms* does not provide protection against discrimination as a smoker.⁹ The *Charter* does not recognize smokers as a group suffering social, political, or legal disadvantage in our society. Under this legislation smoking is not considered a physical disability, and this has been demonstrated in a small handful of cases.

Provincial/Territorial Human Rights Acts

Every province and territory in Canada has legislation governing human rights, and in most jurisdictions it is called the *Human Rights Code* or *Act*. Each Code or Act overrides all other pieces of legislation in that jurisdiction, unless a specific exemption is given. Pertaining to matters over which the provinces/territories have jurisdiction, including housing and employment, these provincial and territorial human rights codes protect people from discrimination on numerous grounds, including disability, race, ancestry, sexual orientation, age, gender, family status, income, etc. Smoking is not identified anywhere as grounds for protection in these Acts, and the NSRA is not currently aware of any Canadian human rights case law where smoking was found to be so. Just because someone exercises their freedom to smoke does not mean they have an absolute right to smoke.

However, there is a difference between smoking and being addicted to nicotine, and there is a body of Canadian case law on addiction and disability. Nicotine addiction hasn't worked its way through the courts yet, but it is feasible in the future that a judge could find someone's nicotine addiction to be a disability. In fact, in a 2000 arbitration case in British Columbia between Cominco smelter operator and its union, a Canadian Labour Relations Board arbitrator found that the company's no-smoking policy unfairly discriminated against its heavily-addicted smoking employees. The arbitrator determined that there was no inherent right to smoke, but required the employer to take all steps up to the point of undue hardship to accommodate the employees. And there lies the key: "reasonable accommodation up to the point of undue hardship." In a housing situation, it is unlikely that a judge would strike down a landlord's smoke-free policy, given the known health hazards of exposure to SHS. In the event of a court case, the judge might require the landlord to reasonably accommodate the tenant's disability by providing a safe smoking area outside.

On the other side of the issue are those who argue that they have the right not to be exposed to SHS. While this right is not absolute, and the law with respect to private spaces has not caught up to the protection afforded people in public places and workplaces, there are a number of avenues that can be pursued when dealing with drifting SHS. Options range from simple initiatives like discussing the problem directly with the neighbours who smoke to convincing the landlord to ban smoking to going to court. Refer to Section 4 for a link to the applicable provincial/territorial human rights law and the body responsible for handling complaints. Keep in mind, however, that the likelihood of success using a human rights code as a means of preventing unwanted exposure to drifting second-hand smoke in a MUD is low.

In addition to the options available to tenants and condo owners, landlords and management boards have rights, including the legal right to protect their investments by designating specific apartment units or entire buildings as non-smoking. Many landlords are unaware of this important fact. There are many benefits to designating a building 100% smoke-free, including decreased risk of fire, lower maintenance costs, and less chance of non-smokers breaking their leases due to unwanted exposure to drifting smoke.

The question of rights in relation to exposure to drifting second-hand smoke in multi-unit dwellings is addressed in the most recent report of the U.S. Surgeon General, *The Health Consequences of Involuntary Exposure to Tobacco Smoke*. The Surgeon General states, "Together with the workplace, the home is a major source of second-hand smoke exposure... Tenants who live in multi-unit housing have certain legal obligations and rights. These obligations and rights make it possible for landlords and property managers to restrict or eliminate smoking in such dwellings."¹⁰

WHAT IS SECOND-HAND SMOKE?

Second-hand smoke is more than a nuisance – it is a toxic mix of more than 4,000 chemicals. In 1992 the U.S. Environmental Protection Agency (EPA) classified SHS as a “Group A” carcinogen. This category is reserved for the most dangerous compounds that have been proven to cause cancer in humans.¹¹ Sixty-nine cancer-causing chemicals have been found in second-hand smoke, including the following:¹²

- arsenic
- cadmium
- benzene
- vinyl chloride

SHS is actually composed of two kinds of smoke:

- mainstream smoke (MS) - what the smoker exhales after taking a puff, and
- sidestream smoke (SS) - the smoke emitted from the burning end of the cigarette.

Most of SHS is sidestream smoke, because more tobacco is consumed when a cigarette is smouldering between puffs. Sidestream smoke contains higher concentrations of certain chemicals than mainstream smoke, sometimes up to ten times higher, primarily because sidestream smoke is produced at lower temperatures than mainstream smoke.¹³ However, to be absolutely clear on this point, smokers are still taking in more toxins than non-smokers, because they are directly breathing in the mainstream smoke as well as the sidestream smoke. Think of a lit cigarette as a small incinerator that operates at temperatures that are not high enough to completely burn the tobacco. The result of this incomplete combustion is thousands of harmful chemical by-products. These compounds can generally be divided into three basic categories:

- Particulate matter (PM), either solids or liquids (including “tar” and nicotine)
- Organic gases (various volatile organic compounds)
- Gas-phase inorganic compounds

Non-smokers can be exposed to second-hand smoke directly and indirectly. Direct exposure occurs when a non-smoker is present in a room where cigarettes are being smoked. Indirect exposure - the complaint of non-smoking tenants - occurs for a period of time after smoking has taken place and has two possible sources:

- Residual airborne tobacco smoke
- The re-emission or “off-gassing” of tobacco smoke from certain objects. Carpets, draperies, and various soft furnishings are particularly prone to absorbing tobacco smoke and then re-emitting it into the air over time.

INDOOR ENVIRONMENTAL PERSISTENCE

It is very difficult to determine how long the chemicals in cigarette smoke persist in an indoor environment after someone has smoked a cigarette. James Repace, a former senior scientist with the U.S. EPA and a world-renowned expert in second-hand smoke, has concluded that SHS “can persist for months depending upon the sorbency of the surfaces.”¹⁴ Sorbency refers to how likely one substance will take up or hold another, either by absorption (one substance permeates another) or by adsorp-

tion (gas molecules stick to a solid surface). Concentrations of SHS constituents decay over time after smoking has stopped, but they can persist at perceptible and/or measurable levels for months or even years in an indoor space where a considerable amount of smoking has occurred.¹⁵ Perceptible means that the tobacco smoke can be seen or smelled. Measurable means the tobacco smoke can be measured using sensitive chemical samplers, although it may no longer be perceptible to humans. In other words, chemicals can remain in the environment long after they are detectable by the senses.

The indoor concentration of a constituent of SHS at a given time depends upon numerous factors:¹⁶

- the number of cigarettes being smoked
- the rate of emission of the constituent from sidestream and mainstream smoke
- the volume of air into which the tobacco smoke is emitted
- the rate of removal of the constituent by ventilation
- the rate of deposition (settling of particles onto surfaces) and sorption
- the desorption and re-emission (off-gassing) from indoor surfaces.

Particulate matter will fall out of the air and land on surfaces, volatile gaseous chemicals can react in the air with other pollutants and sunlight to form new chemical species, and other compounds will either absorb or adsorb onto furnishings and surfaces, then later off-gas. To reiterate, SHS is a very complex and dynamic heterogeneous mixture. These factors influence each other in complex and dynamic ways.¹⁷ For example, studies have demonstrated that sorption can strongly alter concentrations of some tobacco smoke constituents regardless of ventilation rates.^{18, 19} One experiment on the effect of adsorption and absorption on exposure to second-hand smoke found that short-term adsorption to indoor surfaces reduced exposure to certain SHS chemicals while smoking was taking place, whereas later reemission increased concentrations hours after smoking ended. More than half of daily exposure to chemicals with high rates of sorption occurred during non-smoking periods from reemission.²⁰ The bottom line is that due to a variety of factors, there are no exact answers regarding how long the chemicals in tobacco smoke persist, either individually or collectively in the form of second-hand smoke.

Given the complex set of factors that influence the environmental persistence of second-hand smoke, it is very difficult to measure an individual's potential exposure to SHS over time. It is likewise difficult to measure potential short-term exposure because the chemicals that are typically used as "markers" of SHS break down at different rates from many of the other chemicals in SHS. For example, nicotine and cotinine (a by-product of nicotine exposure that is found in the blood, urine, hair, and saliva) are often used as "markers" because tobacco smoke is the primary source of nicotine; however, nicotine decays much more quickly than other chemicals in SHS and therefore is only a reliable measure of potential exposure in the immediate past.²¹ The argument that the dose of toxins inhaled by a non-smoker from second-hand smoke is miniscule compared to what a smoker inhales directly is often based on measurements of the dose of just one or a few of the 4,000 chemicals in SHS. Researchers caution that people who oppose controls on second-hand smoke often make their case by choosing constituents with low absorption or rapid clearance.²²

EFFECTS ON THE BODY

Prolonged exposure to SHS is a significant cause of preventable death. It is estimated that each year in Canada 1,100 non-smokers die from exposure to SHS: over 700 from heart disease and over 300 from lung cancer.²³ These numbers are conservative, as the studies on which they are based only considered SHS exposure in the home and not in the workplace. Research also shows that there is a dose-response relationship between exposure to SHS and its effect on health. This means that the more tobacco smoke a person is exposed to and the longer he/she is exposed, the greater the health risk. Numerous reputable health and scientific agencies, including the World Health Organization and

the U.S. Environmental Protection Agency (EPA) have concluded that there is no safe level of exposure to second-hand smoke.²⁴ In fact, California declared SHS a “Toxic Air Contaminant”(TAC) in June 2005. Air pollutants identified as TACs “cause or contribute to an increase in mortality, in serious illness, or may pose a present or potential hazard to human health.”²⁵ Few issues have been subject to as many scientifically rigorous reviews as SHS. The message from a sea of authoritative reports is clear, consistent, and unanimous – all exposure to SHS is harmful, and therefore involuntary exposure should be eliminated. See Appendix 1 for a list of major studies on SHS that all reach this conclusion.

Unfortunately, little is known about the health consequences of exposure to the off-gassing of second-hand smoke. One scientist believes that a couple of weeks after a cigarette has been smoked, the airborne concentrations of SHS constituents are low enough that they pose a much smaller risk than from other environmental contaminants such as breathing polluted air while driving on a highway.²⁶ However, exposure to drifting SHS in MUDs is generally not an isolated event. In many cases, non-smoking tenants are regularly exposed both to “fresh” SHS drifting into their home as well as to the chemicals off-gassing from surfaces in the apartment or condo. In addition, little is known about the potential health consequences of absorbing the constituents of SHS through the skin, for example, by a baby crawling on a floor contaminated by SHS particles.

Short-Term Effects

The most noticeable short-term consequences of exposure to second-hand smoke are the irritant effects, particularly irritation of the eyes, nose, throat, and respiratory system. Many non-smokers also report headache, dizziness, and nausea when exposed to cigarette smoke. A good ventilation system can reduce or eliminate these irritant effects, but ventilation cannot reduce to an acceptable level the toxins that damage health.

The impact on health in the short-term is more serious than mere irritation, however. Brief exposure increases carbon monoxide levels in the blood, which can trigger angina in people with coronary heart disease. Research shows that brief exposure can also produce noticeable coronary circulation changes (like sticky platelets) in the cardiovascular systems of people with no history of heart problems.²⁷

Recent research has found that even intermittent exposure to second-hand smoke decreases blood flow to wounds. This contributes to abnormal healing and explains in part why people who are regularly exposed to SHS suffer from slow healing and increased scarring of wounds, similar to smokers themselves.²⁸

Individuals with the following chronic health conditions are particularly vulnerable to second-hand smoke:²⁹

- Diabetes
- High blood pressure
- Vascular disease
- Asthma
- Bronchitis
- Emphysema.

Two recent landmark reviews of the scientific evidence provide important information on the health effects of exposure to SHS: The 2006 U.S. Surgeon General's Report, *The Health Consequences of Involuntary Exposure to Tobacco Smoke*, and the 2005 Report of the Air Resources Board of the California EPA, *Proposed Identification of Environmental Tobacco Smoke as a Toxic Air Contaminant*. These effects can be divided into effects on children and adults, and are listed below.

Effects on Children

Children are especially vulnerable to exposure to SHS, for several reasons:

- Their bodies are still developing
- They have smaller airways
- They breathe at a faster rate
- They have more lung area per body size than adults
- They engage in activities, such as crawling and mouthing objects that may put them in greater contact with contaminants in the environment
- They spend more time than adults doing vigorous activities^{30, 31}

Exposure to SHS has been proven to cause the following diseases and conditions in children:

- Pneumonia and bronchitis
- Asthma induction and exacerbation
- Chronic cough, phlegm, wheezing and breathlessness
- Persistent adverse effects on lung function
- Middle ear infections
- Sudden Infant Death Syndrome (SIDS)
- Low birth weight babies
- Decrease in birth weight
- Pre-term delivery

These same reviews have also established an association between exposure to second-hand smoke and exacerbation of cystic fibrosis, and cognitive and behavioural disorders among children.^{32, 33}

Long-Term Effects

Exposure to SHS is responsible for substantial illness, loss of quality of life, and death among adults. A large body of reputable scientific research demonstrates that exposure to second-hand is a cause of the following diseases in adults:^{34, 35}

- Lung cancer (20-30% increased risk)
- Coronary heart disease morbidity and mortality (25-30% increased risk)
- Breast cancer in younger, primarily pre-menopausal women (68-120% increased risk)
- Nasal sinus cancer

Research also shows a strong association between SHS and the following conditions, with evidence growing that SHS exposure is a direct cause:^{36,37}

- Cervical cancer
- Stroke
- Exacerbation of cystic fibrosis
- Decreased lung function
- Miscarriage

THE BOTTOM LINE

- Based on sound science, reputable public health organizations worldwide have concluded that there is no safe level of exposure to second-hand smoke.
- There is a dose-response relationship to SHS exposure - that is, the more a person is exposed to SHS, the more harm is being done his/her tissues.
- Non-smoking tenants who experience drifting SHS in their own homes likely do so on a regular basis, thus being exposed both to airborne SHS and to the constituents that are off-gassing from their carpets, draperies, furniture, etc.
- The length of time for a room or dwelling to off-gas cannot be precisely measured, although experts agree that it could take weeks, months or even years, depending on a variety of factors.
- The health effects of exposure to drifting SHS are simply not known. Studies looking at the short-term effects of SHS exposure in healthy non-smokers reveal inflammation of breathing passages and adverse consequences to the heart, blood and blood vessels. Exposure to second-hand smoke is a major cause of illness and loss of quality of life for children and adults with chronic conditions such as asthma, high blood pressure, and emphysema. Long-term exposure to SHS increases risks of heart disease, lung cancer, breast cancer and nasal sinus cancer, among other things.

Remedies for drifting SHS in MUDs can be loosely divided into two categories – short-term and longer-term – and range in terms of cost and commitment from installing weather-stripping to going to court. Please note that there is some degree of repetition between remedies for tenants, landlords and condominium owners.

PART 3(A) TENANTS

For apartment tenants, there is a whole spectrum of possible remedies to drifting SHS, ranging from:

- Quick fixes (installing physical barriers)
- Breaking the lease
- Advocating for a smoke-free building
- Retaining conflict resolution services
- Seeking relief through a Residential Tenancy Office, and perhaps small claims court

FIRST STEPS: INVESTIGATING YOUR OPTIONS

Before you take any kind of action, try to determine where the smoke is originating and where it is entering your apartment. Look for cracks and gaps between the walls and floor and around windows and doors, as well as open spaces around pipes or electrical work and under countertops and sinks. Knowing if the smoke is coming from common areas or private units will help guide your next steps. Smoking may already be prohibited in the common areas of your building, either under the terms of your lease, under a local smoke-free bylaw, or under a provincial/territorial law that bans smoking in public places. To find out whether smoking is banned in any part of multi-unit dwellings under a local bylaw or provincial/territorial law, call your public health department. For information on relevant provincial/territorial laws, see Section 4 of this document.

Another important step is to document the problem, including when and where you smell smoke and any adverse health effects you experience as a result. You should also carefully document all conversations that you have and all actions that you take. Clarify your goals beyond wanting to breathe smoke-free air and develop a number of scenarios or solutions that can help you get there. Being able to articulate exactly what you would like and how you would like to see it happen will be of great benefit when you speak with others. Keep in mind that finding a solution that works for you may require multiple steps and that as with any dispute, legal action may be required.

SMOKING IN THE COMMON AREAS

- If your lease bans smoking in common areas, contact your superintendent or landlord immediately when you notice someone smoking in these areas and/or present the landlord with a list detailing these incidents. Request that the landlord post no-smoking signs in all of the common areas of your building where smoking is not permitted. Signs can be obtained from your municipality, public health unit or ministry of health.
- If a local bylaw bans smoking in the common areas, launch a complaint with your superintendent or landlord. As a proprietor, he or she is most likely obligated by law to address the problem and should contact bylaw enforcement or public health officials if the smoking does not cease. If the landlord is slow to address the problem, contact bylaw enforcement yourself. They will investigate

the complaint and ensure that the necessary no-smoking signage is posted around the building. The landlord could also write a letter to all tenants informing them of the law and indicating where they are permitted to smoke. Your local public health department may be able to assist by sending your landlord a template letter.

- If a provincial/territorial law bans smoking in common areas of multi-unit dwellings, contact the relevant enforcement authorities. Section 4 provides a list of applicable provincial/territorial smoke-free laws and contact information regarding complaints.

SHORT-TERM REMEDIES

Installing Physical Barriers

Because the factors contributing to drifting SHS can widely vary, the suggestions listed below should be treated on a trial and error basis. Before trying any of the suggestions, you should check with the superintendent or landlord to obtain approval.

- If there is an obvious spot where the smoke is coming in, you can ask either the superintendent or the landlord to address the problem, or try fixing it yourself. If you suspect that the mention of SHS will fall on deaf ears, try pursuing the problem as a 'structural deficiency' issue instead.
- Use caulk (latex, low odour) or spray-in foam
- Install weather-stripping around doors and windows. See below in the ventilation section for secondary problems that can arise due to over-sealing a unit.
- Install duct tape (foil variety) around openings
- Install air-sealing gaskets behind switch plates and electrical outlet plates
- If you are confident that the SHS is originating in a specific unit, ask the superintendent or landlord to install physical barriers in the smoker's apartment too
- Cover or block heating/cooling grilles
- Visit the Canadian Mortgage and Housing Corporation (CHMC) on-line at www.cmhc-schl.gc.ca. They have several useful resources that address the issue of indoor air quality, including a free fact sheet called *Solving Odour Transfer Problems in Your Apartment*.³⁸
- Consult a guide on how to reduce air leakage into a home for detailed information that you can adapt to minimize the infiltration of odours including drifting smoke into your unit.³⁹

Tenants with gas-powered appliances and wood-burning stoves are strongly advised to consult with a professional prior to sealing up their units. The CMHC cautions that any actions that reduce the airflow in apartments with such appliances can lead to life-threatening conditions.

Approaching the Neighbour

- If you do not know your neighbour well or have any reason to be concerned about their reaction, it is advisable not to discuss the problem with them directly.
- If you know who is smoking and you have reason to believe that they will be receptive to you, approach them directly to talk about the situation. They may be completely unaware that their smoking is affecting others. Don't assume that they know about the dangers of second-hand smoke exposure.
- Share with them what you have learned. Your neighbour might be willing to negotiate a smoking arrangement with which you can both be satisfied.
- Don't be surprised, however, if your neighbour is uncooperative, even if your first interaction was positive. Most smokers are addicted to nicotine, and addiction is a very complicated issue. Your neighbour may desperately want to quit but be unable to, and may react to you in frustration. Alternatively, your neighbour may have a siege mentality and feel that after being denied the opportunity to smoke in public places, they will exercise their freedom to smoke in their own home no matter what!

Ventilation Investigation

The CMHC states that most apartment buildings built since the mid-1960s have corridor ventilation systems in place.⁴⁰ These systems are designed to deliver outside air into corridors to maintain positive pressure. Air is continuously pushed under doors, thereby preventing odours from escaping individual units and leaking into the corridors and neighbouring apartments. Older buildings rely on air coming in through cracks and gaps for ventilation. In addition, many apartments have exhaust systems to ventilate the bathrooms and kitchens, with fans either right in individual units or located centrally elsewhere in the building.⁴¹ It is important to note that while improved ventilation can remove the odour of tobacco smoke and the source of eye and throat irritation, no ventilation system is capable of reducing exposure to the many toxic chemicals in second-hand smoke to an acceptable level.

- If SHS is entering your apartment from under the front door, and you suspect that it originated in another private unit, ask the superintendent or landlord to check the corridor ventilation system to ensure that it is operating properly. Sometimes such systems operate intermittently on a timer, and it may be that the schedule needs to be adjusted to increase the amount of fresh air entering the building.
- If SHS is drifting into your unit from a bathroom or kitchen fan, try the tissue test. Turn on your kitchen or bathroom fan and hold a tissue to the grille. The fan should be able to hold the tissue firmly in place. If it doesn't, or actually blows instead of sucks, talk to the superintendent or landlord about having the unit cleaned, repaired or replaced.
- Another possible solution is to investigate having your apartment pressurized to prevent air (and second-hand smoke) leaking in from other units by having a professional install a HEPA-filtered (High Efficiency Particulate Air) heat recovery ventilation system. The idea is to create positive indoor air pressure by using a fan to force fresh air into your unit, thus preventing drifting smoke from entering. For this to work you will have to keep your windows closed and your windows and doors will need to be well sealed. However, there are a couple of drawbacks to this option, the first being expense. Also, positive pressure may cause condensation problems depending on the climate where you live and the ventilation of your unit. Before considering this solution, check your lease or talk to the superintendent or landlord to see if it is permitted. Many high-rise apartment buildings have pressurization systems in the corridors, and pressuring your own unit may interfere with the ventilation system of your building. Then consult with a ventilation expert to ensure that the installation and operation of the system complies with the requirements of the building code.

Question the Construction

You may be able to advance your cause by turning your attention to the construction of your residence, especially if it is a newer building. By following a paper trail (or lack thereof), you may be able to uncover a construction deficiency or irregularity that might help to explain why smoke is coming into your apartment. Contact your municipality and possibly the Fire Marshal's office and ask to see the file on your residence (you may be charged a small fee):

- If your building is relatively new, check to see if all the proper paperwork is there, including a permit for construction, building inspections, and that a certificate of occupancy was issued. You may find that someone cut corners during the construction of your building, that improper building materials were used, or that your residence does not meet Building Code requirements.
- Check to see if there are any outstanding work orders on your building.

- Check to see if there is any paperwork related to the building meeting Fire Code requirements, or request a fire safety inspection. With respect to fire resistance, apartments in MUDs must be constructed and sealed in such a way as to prevent fire spreading from one unit to the next. Where there's smoke, there could be fire...

Breaking Your Lease

If all of your efforts to date have not resolved the problem of SHS infiltrating your residence, you may decide that the next easiest option is to move out. This may require breaking your lease, which can involve penalties to you. Before you take this step, read up on the residential tenancy legislation in your province/territory and make sure you know your rights and obligations. (See Section 4 for information about the relevant legislation in your province/territory.)

- Contact your local public health department and ask to speak with someone who works in tobacco control. It is likely that they have already helped other people in your situation. If your public health department does not have a tobacco specialist, a public health nurse may be able to assist you. Request a letter signed by the Medical Officer of Health spelling out the dangers of exposure to second-hand smoke. Attach the letter from the Medical Officer of Health to the letter you send to your landlord.
- Request a letter signed by your own doctor describing the impact of exposure to SHS on your own health.
- Draft an unemotional letter to your landlord explaining the situation and describing all the steps you have taken to try to rectify the problem. Limit the letter to 4 paragraphs on one page. Draft the letter as if you were writing it to a judge. The first paragraph will detail factual information including how much you pay in rent and how long you have lived in the unit. The second paragraph should explain the nature of the problem and how you have tried to fix it. The third paragraph will contain your preferred solution (breaking the lease), and the last paragraph will request a response from the landlord within a reasonable time frame. Then have your letter reviewed by a lawyer, a legal worker at a community legal aid clinic, or someone whose business acumen you respect. The landlord will either be cooperative and allow you to break the lease, or will contest it (see section on residential tenancy offices below). Make yourself a copy and then hand-deliver the letter or send it. Sending it via registered mail is not recommended, as it can seem too litigious too early. If the landlord does not respond by the date you requested, you have essentially already won.
- When searching for a new apartment, raise the issue of second-hand smoke when talking with the landlord, landlord's agent, superintendent, or other tenants, and make a note of any assurances that you are given. Note that for multi-storey buildings, the air quality is generally better on the lower floors.

LONGER TERM SOLUTIONS

Advocating for a Smoke-Free Building

Smoke-free apartment living is a new wave that is just starting to catch on. In the fall of 2006 the largest landlord in Manitoba (Globe General Agencies) announced that all of its units will be gradually going smoke-free. There are many economic benefits in addition to the health reasons for landlords going 100% smoke-free. See the landlord section of this document for details on making the case.

An important first step in advocating for a smoke-free building is to define what you mean by smoke-free. Options include:

- Smoking banned indoors, including all private units
- Smoking banned indoors and on private balconies/patios

- Smoking banned everywhere on rental property, both inside and out, except outside in a Designated Smoking Area
- Smoking banned everywhere on rental property, both inside and out.

Prepare yourself for what could be a long process. Before you approach the landlord you will need to prepare your case. And, as always, be sure to document all conversations you have and all actions that you take. Here are some suggestions to get started:

- Talk to other residents of your building to find out if they are also bothered by tobacco smoke infiltrating their units. Since the vast majority of Canadians – 80% – do not smoke,⁴² you will likely find many allies willing to support your efforts.
- Conduct a formal survey of residents to determine how many would be supportive of a smoke-free building
- Start a petition for a smoke-free building or for a smoking policy that will be acceptable to most tenants.
- If a tenant organization already exists in your building, join it and bring up the issue. If no such organization exists, start one. All you need is a small group of dedicated people willing to volunteer their time.
- If a tenants' newspaper exists, consider writing articles to raise awareness and educate others on SHS.
- Another potential source of support is a tenant advocacy organization. Operating primarily in larger cities, these organizations provide a variety of services to tenants, including explaining tenants' rights. (See Section 4 for a list of provincial tenants' associations, or check with your provincial/territorial rental authority to find out if a tenant advocacy group operates in your community.) Keep in mind, however, that most tenant advocacy groups do not deal with issues that they regard as personal disputes between tenants. To date, drifting second-hand smoke has largely been considered a question of tenant versus tenant. A tenant advocacy organization would be more inclined to get involved if the problem stemmed from a landlord not meeting his agreed upon responsibility, for example, by failing to enforce a smoking ban in a lease.
- At the same time as you are recruiting supporters, you will also want to be gathering solid evidence of the harm caused by second-hand smoke and the exposure to drifting SHS endured by the tenants in your building.
- Speak with your family doctor about getting a letter attesting to the fact that you have an existing medical condition that is exacerbated by second-hand smoke. Encourage other tenants to do the same.
- Letters of support from health authorities such as your municipal Medical Officer of Health will strengthen your case when you approach your landlord or condo management board seeking a smoking ban.
- Put together a fact sheet on the dangers of exposure to second-hand smoke. The public health department can provide you with information, as can health organizations such as the Non-Smokers' Rights Association, the Clean Air Coalition of British Columbia and Canadian Cancer Society. Landlords may be more receptive to your message when they understand that they may be held liable for knowingly allowing tenants to be exposed to a health hazard.

Once you have recruited support and developed a solid case, you are ready to talk to your landlord. Realistically, the landlord has a couple of ways to go smoke-free (however you define it):

- All of the units or buildings could be designated as smoke-free (the best option to eliminate drifting SHS), or
- Some of the units or buildings could be designated as smoke-free, thereby grouping the smokers together and restricting smoking to a specific area. If this is the option chosen, be sure to advocate for contiguous smoking units, and preferably located on the upper floors of the building. Air tends to rise in multi-storey buildings due to the "stack effect." Refer to the

Canadian Mortgage and Housing Corporation's website (www.cmhc-schl.gc.ca) for more information on "stack effect."

Either way, the best practical route for a building to become smoke-free is for the landlord to impose smoke-free restrictions on new tenants signing new leases. Existing tenants who smoke would not legally have to comply with the new rules, and would be free to continue smoking until they chose to move out. This way, as old tenants who smoke move out and new tenants move in, the building would gradually become 100% smoke-free. Of course, this is assuming that any rulings on future drifting SHS cases maintain the status quo. It is possible that a future ruling could change the way that landlords do business when dealing with smoking in their properties.

LAST RESORTS (WHEN YOU CAN'T OR DON'T WANT TO MOVE)

Residential Tenancy Offices

Each province and territory has a body that has been established to administer the provincial/territorial residential tenancy law and to deal with disputes between tenants and landlords. These bodies go by many different names, including Office of the Rentalsman, Landlord and Tenant Board, Régis du logement, Consumer Services, Rental Office, etc. Section 4 provides information on the relevant provisions in the legislation, as well as contact information for the dispute resolution body in each jurisdiction.

Before taking any action, make sure you know what you are asking for. Various possibilities include:

- Breaking your lease (if request was contested by the landlord)
- Having the landlord evict the smoking neighbour
- Mandating that the landlord implement a smoking policy
- Requiring that the building be declared 100% smoke-free

Be sure to have detailed documentation indicating all the steps you have taken prior to arriving at your hearing. Check your lease to see if it specifies that smoking is restricted in certain places. Even if the lease does not mention smoking, there are a number of clauses that may be relevant to your problem of drifting second-hand smoke. Most rental agreements and provincial/territorial tenancy laws specify that the renter is entitled to "quiet or peaceful enjoyment" of their residence and that it must be "fit for human habitation." It is conceivable that you could win a case based on the argument that the second-hand smoke infiltrating your unit destroys your enjoyment of your property. Others have gone this route and been successful. The Non-Smokers' Rights Association has prepared a short document on Canadian case law pertaining to second-hand smoke. It is strongly suggested that anyone going this route consider hiring a lawyer. Because this is still an emerging area in case law with only a small handful of cases to date, the residential tenancy office may be reluctant to set a precedent.

Small Claims Court

Depending on the outcome of your case at the residential tenancy office, as well as the legal system in your jurisdiction, you may decide to take your case to small claims court to recover any financial losses you experience. For example, you may wish to try to have the landlord pay for your moving expenses. A small claims court can generally handle any action for the payment of money or recovery of property where the amount claimed does not exceed a specified sum. The amount varies by province, from \$3,000 or \$5,000 in some jurisdictions to as high as \$25,000 in others. You typically do not need a lawyer to go to small claims court.

- Get two sets of claim forms (one for practice). Discuss the process with a staff person during a quiet time. Other people have gone this route and won.
- Keep a record of your expenses if you would like to have your costs recovered.

PART 3(B) CONDOMINIUM OWNERS

Many of the suggestions already listed for apartment dwellers will also apply to condominium owners. However, there are some key differences that will have an impact on how condo owners should proceed.

A condominium is a form of property ownership in which each owner holds title to his/her individual unit, plus a fractional interest in the common areas of the multi-unit project. Each province and territory has a piece of legislation that stipulates the processes for condominium corporations to become established. Section 4 includes links to these pieces of legislation.

Every condominium has a declaration, a legal document that registers the condo, and details the conditions or restrictions with respect to the occupation and use of the units and common areas. Condominiums also have bylaws, which are procedures that must legally be followed, as well as rules to promote the safety, security or welfare of the owners and of the property and assets of the corporation. Every condominium also has a board of directors, an elected group of condo owners that meets regularly to discuss issues related to the operation of the condominium as a whole.

As a condo owner, your first step will be to check the declaration as well as the bylaws and rules. It is likely that your condo already has some sort of language in its rules that deals with quiet or peaceful enjoyment, or the safety and welfare of the owners and of the property. As with tenants in apartment buildings, you need to clarify exactly what your goals are. Some options include:

- Having the building declared 100% smoke-free via a change to the declaration. A decision of this importance will most likely require a vote by all owners of the condominium. In Ontario, 80% of owners would need to vote in favour for a change such as this to be approved.
- Having second-hand smoke explicitly defined as a nuisance in the declaration. This option wouldn't ban people from smoking in their own units, but it would remove the burden of proof from future plaintiffs involved in legal action.
- Having the condo board pass a smoking policy that most people could live with (for example, that permits smoking only on the balconies).
- Having the condo board enforce the existing rules and require that the smoker stop smoking in his/her unit, or even seek to have the smoker evicted (a long shot!)
- Having the condo association pay for structural improvements to reduce the infiltration of second-hand smoke into your unit. However, pursuing this avenue as a "structural deficiency" issue may get you further if you suspect that the board will not be receptive to hearing about drifting second-hand smoke.
- Having a rule implemented requiring caulking and sealing of cracks and gaps whenever someone is renovating all or part of their condo. This non-threatening option is more of a proactive measure and should, in theory, be relatively easy to get passed.

Before approaching the condominium's board of directors with your case, it is suggested that you:

- Maintain detailed documentation regarding the extent of the problem, the measures you have tried to fix it, the people you have spoken with, etc.
- Ask your neighbours if they are bothered as well (remember, 80% of Canadians are non-smokers). If you find there are others who would like to get involved, consider starting a working group.
- Conduct a survey to find out who else in the building is bothered, and if there is interest in having a smoke-free condo. You may want to hold off formally surveying until after approaching the board, as it may be advantageous to have the board's support and endorsement.

- Start a petition
- Gather evidence of the harmful effects of exposure to second-hand smoke (see appendix), along with your own health complaints and those of your neighbours
- Obtain a letter from your family doctor
- Obtain a letter from your Medical Officer of Health (see tenant section)
- Gather examples of other condominiums that have already gone 100% smoke-free (contact the Non-Smokers' Rights Association)
- Make a business case in terms of increased property values and reduced risk of fire. Seeking the assistance of a realtor may be advantageous in terms of clarifying the demand for smoke-free condos.

Now you are ready to approach the board. The board may at any time call a meeting of owners, or you may prefer to wait for the annual general meeting (AGM).

LITIGATION

Going to court is not an optimal route to take – it can be time-consuming and expensive and it pits private parties against each other. However, if all else fails, one of these may be your best option:

- Taking your smoking neighbour to court on a nuisance claim. Remember, most condos have language in their rules that deals with quiet or peaceful enjoyment of the property. Condominium law in your jurisdiction may require that you seek mediation or arbitration prior to taking the issue to court.
- Taking the condo board to court for failing to enforce the existing rules and thus failing to act to prevent your exposure to second-hand smoke.

If you are interested in seeking legal redress, you will need to seek legal counsel.

Sometimes all that is needed is the threat of court action for a solution to be found. And even where legal action is pursued (as it has been in a handful of Canadian cases as well as throughout the U.S.), most cases are settled, with only a small number of cases involving a judgment being rendered.⁴³

For more information on the provisions of provincial/territorial laws that may apply to your problem of drifting second-hand smoke, see Section 4. Please note that none of this information is intended to substitute for professional legal advice, nor is the Non-Smokers' Rights Association in a position to litigate on behalf of individuals or groups.

PART 3(C) PROPERTY OWNERS/LANDLORDS/ CONDOMINIUM ASSOCIATIONS

RIGHTS OF PROPERTY OWNERS

As a landlord or condominium association, you have the potential to play a very important role in reducing or eliminating a significant cause of illness and disease: exposure to second-hand smoke.

As a general rule, landlords are permitted to impose restrictions on their tenants unless the restrictions violate existing laws or are discriminatory.

Building/condominium owners and home owners who rent self-contained apartments in their homes have the legal right to designate specific apartment units or entire buildings as non-smoking.

This cannot be over-emphasized, as many property owners and landlords are unaware of this important fact. A smoke-free policy is no different than a policy that prohibits loud music or that protects the well-being of other tenants. Common/civil law generally grants owners the right – and in some cases the obligation – to protect their property and other tenants.

As was mentioned at the beginning of this document, every province and territory in Canada has a piece of legislation governing human rights, and in most jurisdictions it is called the *Human Rights Code* or *Act*. Pertaining to specific matters including housing and employment, these provincial and territorial laws protect people from discrimination on the basis of disability, race, ancestry, sexual orientation, age, gender, family status, income, etc. Smoking is not identified anywhere as grounds for protection in these Acts, and the NSRA is not currently aware of any Canadian human rights case law where smoking was found to be so. Just because someone exercises their freedom to smoke does not mean they have an absolute right to smoke.

However, there is a difference between smoking and being addicted to nicotine, and there is a body of Canadian case law on addiction and disability. Nicotine addiction hasn't worked its way through the courts yet, but it is feasible in the future that a judge could find someone's nicotine addiction to be a disability. In fact, in a 2000 arbitration case in British Columbia between Cominco smelter operator and its union, a Canadian Labour Relations Board arbitrator found that the company's no-smoking policy unfairly discriminated against its heavily-addicted smoking employees. The arbitrator determined that there was no inherent right to smoke, but required the employer to take all steps up to the point of undue hardship to accommodate the employees. And there lies the key: "reasonable accommodation up to the point of undue hardship." In any future drifting SHS cases, it is unlikely that a judge would strike down a landlord's smoke-free policy, given the known health hazards of exposure to SHS. What would be more likely is that the judge might require a landlord to reasonably accommodate a tenant's disability by providing a safe smoking area outside.

There are many benefits to designating a building 100% smoke-free:

- Reduced risk of fire. According to the Ontario Office of the Fire Marshal, lit smokers' materials are the number one ignition source in preventable fatal fires.⁴⁴
- Reduced cleaning costs. When Air Canada went 100% smoke-free in 1994, it realized savings of approximately \$900,000 a year by not having to clean ashtrays, and by decreasing the frequency of deep cleanings of its aircraft from 6 months to 9.⁴⁵
- Reduced painting frequency and costs
- Less chance of non-smokers breaking their leases due to unwanted exposure to drifting smoke
- Less chance of being sued by tenants over harm to health from exposure to second-hand smoke
- Increased marketability—a large majority of Canadians are non-smokers and smoke-free properties are in demand both in the resale and rental markets.
- Potentially lower insurance costs

HOW TO GO SMOKE-FREE

Communicating and implementing a well thought-out smoking policy or ban is arguably a more desirable option than the constant headache of handling second-hand smoke complaints. Indeed, a smoking policy also eliminates the risk of non-smokers breaking their leases or suing over unwanted SHS exposure. An important first step is to clarify what you mean by smoke-free. Refer to *Advocating for a Smoke-free Building* for various smoke-free scenarios. In the case of an existing building with tenants, the approach to minimizing drifting second-hand smoke that is likely to meet with the least resistance, particularly if some residents smoke, is a stepped approach:

- Conduct a brief survey of your residents to discover how many smoke and where they usually smoke, to understand the extent to which drifting second-hand smoke is a problem, and to assess their reaction to possible restrictions on smoking in the building or complex. Identify which sections or buildings could become non-smoking most easily by asking residents, "Would you prefer to live in a totally non-smoking section or building including the private units and the balconies?"
- A first step is to designate the inside common areas as smoke-free. You may also want to create smoke-free common areas outside too. It may be useful, however, to set up an outside smoking area in a location where the smoke will not affect non-smoking residents. In the case of a landlord, send a letter and SHS fact sheet well in advance to all tenants to advise them of the policy change. The letter could say something like, "Due to the known health effects of second-hand tobacco smoke and the fact that smoke drifts into adjacent units through cracks, ventilation, windows and doors, as of (date), smoking will no longer be permitted in the following common areas (list areas where smoking is banned)." You would then explain how the new policy will be enforced and call for everyone's cooperation.⁴⁶
- Following a ban on smoking in common areas, you could then designate certain units or buildings in a large complex as smoke-free. This approach reduces or eliminates tenants' unwanted exposure to SHS, as well as reducing complaints about drifting second-hand smoke and resultant feuds between tenants.⁴⁷
- An alternative would be to gradually shift the entire building to smoke-free status. As smokers move out, prospective new tenants/condominium owners would be advised that the building is becoming "smoke-free" and that smoking is prohibited both within individual units and in common areas. It is recommended that smoking also be prohibited on balconies and patios of units to prevent second-hand smoke from entering open windows.

This approach has the advantage of being the least disruptive to current residents but has the disadvantage that it could take a long time before the problem of drifting second-hand smoke is resolved. In the case of a condominium where turnover is perhaps much slower, this arguably defeats the purpose of a smoke-free policy. Currently there is no Canadian case law to indicate how such a situation might play out, but it is hoped that the courts would support

and enforce restrictions to maintain a level playing field within the condo. Avoiding enclaves of greater “rights” would also avoid resentment and confusion amongst residents.⁴⁸

Suggested Language to Include in a Lease

The following language can be adapted for inclusion in a lease/tenancy agreement for an apartment or condominium unit. To avoid any possible confusion, be very specific about which areas are included in the ban, and which areas will be excluded from the ban. Also note that the word “shall” is preferable over the word “may,” which is more subjective and could be interpreted as permissive.

Due to the increased risk of fire, increased maintenance costs and the known health effects of exposure to second-hand smoke,

- a. *No owner, family member, tenant, resident, guest, business invitee, or visitor shall smoke cigarettes, cigars, or any similar product whose use generates smoke anywhere within the boundaries of the project or complex. This prohibition shall include private units and private outdoor balconies and patios, enclosed common areas including the front lobby, hallways, elevators, corridors, stairwells, laundry room, exercise room and exclusive use common areas.*
- b. *“Smoking” shall include the inhaling, exhaling, burning, or carrying of any lighted cigarette, cigar, or any similar product whose use generates smoke.*
- c. *“Business invitee” shall include but is not limited to any contractor, agent, household worker, or other person hired by the owner, tenant, or resident to provide a service or product to the owner, tenant, or resident.*
- d. *Any owner who sells his/her unit shall specifically disclose to all potential buyers and realtors that smoking is prohibited everywhere within the building, including the private units and private outdoor patios and balconies. Any owner who rents or otherwise allows someone other than the owner to reside within or occupy the unit shall disclose to all prospective residents prior to their residency or occupancy that smoking is prohibited within all said areas.*

What To Do When a Smoking Restriction Is Violated

When a landlord or condominium board discovers that a tenant or resident has violated a smoking restriction, a number of steps can be taken:

- A usual first step is to advise the tenant/resident of the breach of the rules and to issue a polite warning regarding future consequences.
- For a subsequent offence, if the tenant/resident is smoking in a common area where it is forbidden by law, the landlord/condo board can call either the public health department (or in the case of Québec, the Ministry of Health) to have an inspector come by. The enforcement officer will likely issue a warning or a fine, which may prove sufficient to deter the offending tenant from smoking again where prohibited. If smoking is prohibited under the condominium association’s rules or declaration, the rules or declaration will likely specify the penalties for a breach of the no-smoking provision. If the resident repeatedly violates the smoking restriction, the condo board may have grounds for requiring the offender to sell his/her unit. Unfortunately, there is currently no case law on this issue to indicate how the courts might treat such a situation.
- For a tenant, if the problem persists, you may need to inform the provincial/territorial body responsible for resolving disputes between landlords and tenants. See Section 4 for contact information.

There are numerous laws affecting the rights and responsibilities of both tenants and landlords of multi-unit dwellings:

- Individual tenancy agreements between the landlord and tenant, which are legally binding documents
- Municipal bylaws
- Provincial/territorial smoke-free legislation
- Provincial/territorial legislation governing residential tenancy, which sets out the legal rights and obligations of landlords and renters of residential property
- Provincial/territorial legislation governing condominiums
- Human rights codes.

One hundred and eighty municipalities across Canada have bylaws restricting smoking in buildings accessible to the public.⁴⁹ Many of these bylaws prohibit smoking in all public or common areas of building, including hallways, foyers, stairways, elevators, and laundry rooms.

Provincial/territorial residential tenancy legislation details the rights and responsibilities of landlords and tenants of residential premises and provides a means of settling disputes. Most residential tenancy acts stipulate that tenants are entitled to “quiet enjoyment” of their property, which includes the right to be free from unreasonable disturbances by other tenants. While these laws usually do not specify second-hand smoke as grounds for breach of quiet enjoyment, there is emerging case law to support a claim that second-hand smoke unreasonably interferes with “quiet enjoyment.”⁵⁰ In fact, the Canada Mortgage and Housing Corporation (CMHC) includes “cigarette smoke seeping into your unit from other renters” among a list of potential problems for tenants.⁵¹

Note that for the purpose of this paper, in accordance with provincial/territorial residential tenancy legislation, the discussion of possible legal remedies does not apply to the following types of residences:

- premises occupied for business purposes, with living accommodation attached, if rented under a single agreement
- rooms in the living quarters of the landlord, if the landlord resides in those quarters
- hotels, motels, motor hotels, resorts, lodges, cottages/cabins in a campground or trailer park, tourist homes, bed and breakfast establishments or farm vacation homes, if a person resides there for less than 6 consecutive months
- college/university residences
- nursing homes
- lodge accommodations
- group homes, emergency shelters and other social care facilities
- prisons.

In addition, depending on the jurisdiction, the legislation may or may not apply to mobile homes and mobile home parks, rooming houses, boarding houses, and co-operative housing.

Provincial/territorial legislation governing condominiums sets out the processes that condominium corporations must follow in establishing and enforcing rules governing the conduct of owners and visitors in their private units and common areas. Nothing in these laws prevents condominium corporations from prohibiting smoking in private units and/or common areas, provided the required process is followed and the required number of votes is obtained. See the relevant province/territory below for a link to the applicable provincial/territorial law governing condominiums.

BRITISH COLUMBIA

Residential Tenancy Act

URL: www.qp.gov.bc.ca/statreg/stat/R/02078_01.htm

A landlord may declare their property smoke-free. If the lease specifies that smoking is prohibited and the landlord discovers that the tenant has violated the rental agreement by permitting smoking in the rental unit, the landlord is first required to issue a written warning called a breach letter. The letter indicates that the tenant must comply with the rental agreement or face eviction. The eviction process cannot begin until the landlord has issued the breach letter.⁵²

- Section 14(2) of the *Residential Tenancy Act* permits an amendment to the tenancy agreement, other than to a standard term, provided both the landlord and tenant agree to the change.
- Section 28 states that a tenant is entitled to quiet enjoyment of the property including, but not limited to, the right to “freedom from unreasonable disturbance” as well as the right to the use of common areas “free from significant interference.”
- Section 32(1) requires the landlord to maintain the residential property in a state of repair that complies with all health, safety, and housing standards required by law.
- Section 45(3) permits a tenant to end a tenancy agreement if a landlord “breaches a material term.”
- Section 47(1) authorizes a landlord to end a tenancy if a tenant or the tenant’s guest has “significantly interfered with or unreasonably disturbed another occupant or the landlord” or “seriously jeopardized the health or safety or a lawful right or interest of the landlord or another occupant.”
- Section 58 specifies that a dispute between a landlord and tenant regarding rights and obligations may be settled by applying for arbitration.

ALBERTA

Residential Tenancies Act

URL: www.qp.gov.ab.ca/documents/Acts/R17P1.cfm

A landlord may include a no-smoking clause in the lease. Although smoking in the rental unit when the lease includes a no-smoking clause is not among the prescribed reasons for a landlord to evict a tenant, smoking prohibitions can be enforceable if they are included in a lease and agreed upon by both parties. If a tenant breaches the rental agreement by allowing smoking in the rental premises, the breaches are dealt with under contract law by the Alberta courts and may lead to an eviction.⁵³

- Section 16 of the *Alberta Residential Tenancies Act* stipulates that a tenant is entitled to “peaceful enjoyment of the premises” and that “the premises will meet at least the minimum standards prescribed for housing premises under the *Public Health Act* and regulations.”
- Section 21 requires a tenant not to interfere in any significant manner with the rights of the landlord or other tenants.
- Under Section 26(1), if a tenant violates the tenancy agreement, the landlord may apply to a court for recovery of damages resulting from the violation and/or termination of the tenancy. If a tenant commits a substantial breach, Section 29(1) authorizes the landlord to apply to a court to terminate the tenancy by serving the tenant with at least 14 days’ notice.
- Section 28(1) authorizes a tenant to terminate the tenancy by giving the landlord at least 14 days’ notice, provided the landlord has committed a substantial breach of the residential tenancy agreement, and an executive officer has issued an order under section 62 of the *Public Health Act* related to the breach, and the tenant believes that the landlord has failed to comply with the order.
- Section 37(1) authorizes a tenant to seek one or more remedies if a landlord violates the tenancy agreement, including recovery of damages resulting from the breach; abatement of rent; and/or termination of the tenancy if the court concludes that the breach is of such significance that the tenancy should be terminated.

Complaints

Consumer Services, Alberta Government Services, Government of Alberta

URL: <http://governmentservices.gov.ab.ca/index.cfm?fuseaction=section:landlords:complaint>

Telephone: 1-877-427-4088

The *Residential Tenancies Act* also permits communities to establish a local Landlord and Tenant Advisory Board to provide information on tenancy issues and mediate disputes; several communities in Alberta have established such boards.

Condominium Property Act

URL: www.canlii.org/ab/laws/sta/c-22/20051114/whole.html

Smoke-Free Places Act

URL: www.qp.gov.ab.ca/documents/Acts/S09P5.cfm?frm_isbn=0779737172

The *Smoke-Free Places Act* bans smoking in public places and workplaces where minors are permitted. Under the *Act*, smoking is banned in the common areas of apartments and condominiums, including patios, pools, other recreation areas, and enclosed parking garages.

Smoking is banned in the following group living facilities, except by residents in designated smoking rooms that are separately enclosed and ventilated according to the regulations:

- a facility for the long-term care of veterans
- a nursing home under the *Nursing Homes Act*
- a facility as defined under the *Mental Health Act*
- a residential facility for adults only licensed under the *Social Care Facilities Licensing Act*.

Where a business operates from a private home and has employees that do not live in the home, smoking is banned in the part of the residence where the business is operated.

Complaints

For questions about the *Smoke-Free Places Act*, contact “Alberta Connects” at 310-4455.

For questions about the application/enforcement of the *Act* in workplaces, contact the Workplace Health and Safety Office, Alberta Human Resources and Employment, Government of Alberta.

SASKATCHEWAN

The Residential Tenancies Act

URL: www.qp.gov.sk.ca/documents/English/Statutes/Statutes/R22.pdf

A landlord may declare the property to be smoke-free. If smoking is allowed in the tenancy agreement or if the agreement does not address smoking, then it is permitted in the rental unit subject to everything else. If the lease contains a no smoking clause and the landlord discovers that the tenant permits smoking in the rental unit, the landlord may evict the tenant. However, the tenant must first be given an opportunity to remedy the breach.⁵⁴

- Statutory condition 1 entitles all residents to “quiet enjoyment” of their residence.
- Statutory conditions 2(1) and 3(a) require a landlord to maintain common areas of a residence and residential units in “a good, safe and healthy state and in a tenantable state of repair” and “fit for habitation, use and enjoyment.”
- If a landlord fails to meet the obligations described above, a tenant may apply to the Rentalsman. Section 47 authorizes the Rentalsman to order that the tenancy be terminated; direct any repair to be made; or make any other order the Rentalsman considers appropriate.
- Statutory condition 5 requires a landlord to comply with all legal requirements concerning health and safety.
- Statutory condition 7(1) requires a tenant not to make or permit “a nuisance or disturbance to other persons in adjacent residential premises.”
- Statutory conditions 7(2) and 7(3) set out a landlord’s response to a tenant who is causing a disturbance. The landlord must first request that the tenant discontinue the behaviour. If the tenant fails to stop or repeats the contravention, the landlord may apply to the Rentalsman under section 47 to have the tenant evicted.
- Section 27(1) authorizes a landlord to terminate a tenancy agreement immediately after serving a notice of termination if the tenant contravenes the requirement not to create a disturbance/nuisance for other tenants.
- Under section 55(1), any person who interferes with a tenant’s right to quiet enjoyment or to a safe and healthy residence, or a landlord who fails to comply with legal requirements concerning health and safety, is guilty of an offence and liable to a maximum fine of \$500 or up to six months in jail or both. As well, the person who was aggrieved as a result of the offence may apply to court for compensation for any costs or loss suffered as a result of the offence.

The Tobacco Control Act

URL: www.qp.gov.sk.ca/documents/english/Statutes/Statutes/t14-1.pdf

Saskatchewan’s *Tobacco Control Act* bans smoking in enclosed public places. Smoking is not permitted in private homes that operate as day cares during the hours in which child care services are provided. Unlike the situation in many other provinces, the smoking ban does not apply to the common areas of apartment buildings or condominiums. Smoking is banned in the following multi-unit facilities, except in designated smoking rooms:

- a special-care home as defined in *The Housing and Special Care Homes Act*
- a personal care home as defined in *The Personal Care Homes Act* that provides accommodation to more than 10 people.

Proprietors who fail to comply with the requirements of the legislation may be fined an amount ranging from a maximum of \$3,000 for a first offence to a maximum of \$50,000 or a fourth or subsequent offence.

MANITOBA

The Residential Tenancies Act

URL: <http://web2.gov.mb.ca/laws/statutes/ccsm/r119e.php>

Landlords have the right to restrict smoking in common areas, such as hallways, elevators, laundry rooms, and recreation facilities. If a tenant smokes in those areas, the landlord could give a warning and then issue a notice for breach of a reasonable rule. Similarly, if a landlord has a rule prohibiting smoking in the rental units and a tenant breaches that rule, the landlord could give a warning and then a notice of termination. However, the tenant could challenge the landlord's notice and ask the provincial authority to determine if the rule is reasonable.⁵⁵

- Section 11(2) authorizes a landlord to establish and enforce rules in addition to those set out in the tenancy agreement, including prohibiting smoking in common areas and/or in the rental units, provided “the rule is in writing, is made known to the tenant, and is reasonable in all the circumstances.”
- According to Section 11(3), for a rule to be reasonable it must be intended to “(i) promote a fair distribution of services and facilities ... (ii) promote the safety, comfort or welfare of residents ... or (iii) protect the landlord's property from abuse.”
- Section 59(1) requires the landlord to maintain the rental unit and residential complex “in a good state of repair, fit for habitation and in a state that complies with health, building and maintenance and occupancy standards required by law.”

- Sections 62 and 73 require the landlord and tenant, respectively, not to unreasonably disturb the enjoyment of other residents.
- Section 67 requires a landlord to make a prompt enquiry and a reasonable effort to remedy the situation when informed that a tenant's right to quiet enjoyment has been disturbed.
- Section 74 requires a tenant and his guests not to "impair the safety or other lawful right or interest" of the landlord or other tenants whether by act or omission.
- Under Section 89(1) a tenant has the right to terminate a tenancy if a landlord fails to meet his obligation to ensure quiet enjoyment.
- Under Section 96(1) a landlord may give a tenant a notice of termination if the tenant has disturbed the enjoyment of others or if the tenant has failed to comply with an additional rule and the tenant fails to remedy the contravention within a reasonable time after receiving written notice from the landlord.
- Under Section 195(3) a person who is guilty of an offence is liable on summary conviction to a fine of not more than \$2,000 for an individual and not more than \$10,000 for a corporation.

Non-Smokers Health Protection Act

URL: <http://web2.gov.mb.ca/laws/statutes/ccsm/n092e.php>

The *Non-Smokers Health Protection Act* bans smoking in all enclosed public places and workplaces. Smoking is not permitted in the common areas of residential buildings.

Smoking is also banned in the following "group living facilities," except by residents and only in designated smoking rooms that are separately enclosed and separately ventilated (smoking rooms are not permitted in facilities exclusively for children):

- personal care homes
- hospital addictions units
- hospital palliative care units
- hospices
- residential care facilities
- residential addictions treatment facilities
- residential shelters
- children's group homes
- children's treatment facilities

Proprietors of these facilities are required to "take reasonable steps to minimize the drifting of smoke into non-smoking areas of the premises." Proprietors who fail to comply with the law may be fined an amount ranging from \$500-\$3,000 for a first offence to \$1,000-\$15,000 for a third or subsequent offence.

ONTARIO

Tenant Protection Act, 1997/Residential Tenancies Act 2006 (in effect January 31, 2007)

URL: www.e-laws.gov.on.ca/DBLaws/Statutes/English/97t24_e.htm

www.e-laws.gov.on.ca/DBLaws/Statutes/English/06r17_e.htm

A landlord has the right to include a no smoking clause in the lease. Although the *Tenant Protection Act* does not specifically address smoking, a landlord may have grounds to seek eviction of a tenant if the smoke damages the property or bothers other tenants.⁵⁶

- Section 24(1) requires a landlord to maintain the residential complex, including the rental units, “in a good state of repair and fit for habitation” and to comply with health, safety, housing, and maintenance standards.
- Sections 26 prohibits a landlord from “substantially” interfering with the “reasonable enjoyment of the rental unit” and the rental property.
- Section 34(1) provides remedies to a tenant if the Tribunal determines that a landlord has breached the obligations under 24(1). Possible remedies include termination of the tenancy, abatement of the rent, repairs made at no cost to the tenant, or payment of a specified sum to the tenant as compensation.
- Section 64(1) authorizes a landlord to issue a notice of termination if a tenant or a tenant’s guest “substantially interferes with the reasonable enjoyment of the residential complex” or “substantially interferes with another lawful right, privilege or interest of the landlord or another tenant.” If the tenant complies within seven days, the notice of termination is rescinded.
- Section 206(3) stipulates that a landlord who knowingly interferes with a tenant’s right to reasonable enjoyment of the premises is guilty of an offence and is liable upon conviction to a fine of not more than \$10,000 (Section 206(6)).

Smoke-Free Ontario Act

URL: www.ontla.on.ca/documents/Bills/38_Parliament/Session1/b164ra.pdf

The *Smoke-Free Ontario Act* bans smoking in all workplaces and public places, effective May 31, 2006. The legislation prohibits smoking in a limited number of multi-unit dwellings, since some workplaces are also residences:

- Common areas of condominiums, apartment buildings, and university/college residences, including elevators, hallways, parking garages, party rooms, laundry facilities, lobbies, exercise rooms (section 9(2)3).
- Private homes that provide day care, as defined by the Day Nurseries Act, whether or not children are present (section 9(2)5).

Proprietors of these places are required to give notice of the smoking ban, to post any required signs, and to ensure compliance.

Certain types of residences that are also workplaces are permitted to have smoking rooms for the use of the residents only, provided the smoking rooms are separately enclosed and meets prescribed ventilation requirements, and the residents are able to smoke safely without assistance from an employee. The following facilities are permitted to have designated smoking rooms:

- a nursing home as defined in the *Nursing Homes Act*
- an approved charitable home for the aged under the *Charitable Institutions Act*
- a home as defined in the *Homes for the Aged and Rest Homes Act*
- a retirement home that also provides care to the residents
- a supportive housing residence funded or administered through the Ministry of Health and Long-Term Care or the Ministry of Community and Social Services
- a psychiatric facility listed in the regulations
- a facility for veterans.

Proprietors who fail to ensure that the smoking ban is respected could be fined up to \$1000 for a first offence and up to \$5,000 for a second and subsequent offence.

QUÉBEC

A landlord may prohibit smoking in the lease or in the bylaws of the building. If a no smoking clause is written into a lease or a bylaw and the landlord discovers that the tenant smokes in the rental unit, the landlord has grounds to evict the tenant, but only if the landlord can prove that this action by the tenant has resulted in a serious injury. The landlord may also apply to have the tenant cease the offensive activity; i.e. for a court order to instruct the tenant to stop smoking in the rental unit.⁵⁷

Québec Civil Code, Title Two: Nominate Contracts, Chapter IV: Lease (Residential Tenancy)

URL: www.rdl.gouv.qc.ca/fr/pdf/Ccq_du_louage_08_09_2006.pdf

- Section 1854 requires a landlord to ensure that the property is in a good state of repair and to provide a tenant “with peaceable enjoyment of the property throughout the term of the lease.”
- Section 1858 requires a landlord to warrant against “legal disturbances of enjoyment of the leased property” and requires a tenant to notify the landlord of a disturbance before pursuing a remedy.
- Section 1860 requires tenants not to “disturb the normal enjoyment of the other tenants.” A landlord may seek termination of the lease if a tenant violates the right of other tenants to “normal enjoyment.”
- Section 1861 provides various remedies to a tenant who is disturbed by another tenant, provided the landlord was notified and the disturbance persisted. Possible remedies include a reduction of rent, the termination of the lease, or recovery of damages from the landlord unless the landlord can prove he acted with diligence.
- Section 1910 requires a landlord to maintain a dwelling “in good habitable condition.”
- Under 1912, if a landlord fails to comply with legal requirements related to maintenance, habitability, safety, and sanitation, or if a landlord or tenant fails to comply with a legal obligation related to the “safety and sanitation” of a unit, the remedies available include seeking damages, performance of the obligation, or termination of the lease.
- Section 1913 prohibits a landlord from renting a dwelling that is unfit for habitation. A dwelling is considered unfit for habitation “if it is in such a condition as to be a serious danger to the health or safety of its occupants or the public, or if it has been declared so by the court or by a competent authority.”

Tobacco Act (Loi sur le tabac)

URL: www2.publicationsduquebec.gouv.qc.ca/dynamicSearch/telecharge.php?type=5&file=2005C29A.PDF

The Tobacco Act bans smoking in workplaces and public places. The law also prohibits smoking in a limited number of residential dwellings:

- in the common areas of multi-unit dwellings that contain at least six units
- in the common areas of residences for the elderly
- in private homes that operate a family daycare during the hours in which children are being cared for
- in indoor common areas of prisons.

Smoking is prohibited in the following residential facilities, except by the residents in separately enclosed and separately ventilated smoking rooms (DSRs) and/or in designated rooms, which cannot represent more than 40% of all the rooms. Such settings include:

- psychiatric hospital centers, as well as short- and long-term care facilities
- correctional, rehabilitation, and reintegration centres.

In terms of SHS in residential settings, Quebec's Tobacco Act falls below national-level standards by not prohibiting smoking completely, or by not restricting smoking to DSRs in medical, correctional, and short- and long-term care facilities.

A proprietor who fails to comply with the smoking ban may be fined an amount ranging from \$400-\$4,000 for a first offence and \$1,000-\$10,000 for a subsequent offence.

NEW BRUNSWICK

The Residential Tenancies Act

URL: www.gnb.ca/acts/acts/r-10-2.htm

A landlord and a tenant may agree to any addition to a lease that does not alter any right or duty in the *Residential Tenancies Act* or the Standard Form of Lease. If smoking is expressly permitted or not addressed in the tenancy agreement, then it is permitted in the rental unit subject to everything else. If a no smoking clause is written into the Standard Form of Lease and the landlord discovers that the tenant permits smoking in the rental unit, the breach would be dealt with on a case-by-case basis by the Rentalsman and could result in an eviction. Alternatively, if the tenant remains, the landlord may make a damage claim at the end of the tenancy to recover the cost of cleaning and repainting the premises.⁵⁸

- Section 3(1) requires a landlord to maintain the premises “in a good state of repair and fit for habitation” and to comply with “all health, safety, housing, and building standards and any other legal requirement respecting the premises.”
- Section 4(1) requires a tenant and guests of a tenant to “conduct themselves in a manner that will not cause a disturbance or nuisance.”
- If a tenant fails to comply with his obligations, Section 5(1) authorizes the landlord to serve on the tenant a notice stating the complaint. If the tenant fails to comply within the time prescribed, the landlord is authorized under 5(2) to send a notice to the rentalsman.
- Section 5(4) authorizes the rentalsman to terminate the tenancy if a tenant fails to comply with his obligations to the satisfaction of the rentalsman.
- Section 6(1) empowers a tenant to serve a notice of complaint on a landlord if the landlord fails to comply with his obligations under the Act or the terms of the tenancy agreement.
- Section 6(2) empowers a tenant to advise the rentalsman that the landlord has failed to comply with his obligations in the time prescribed. Under Section 6(4), if the landlord fails to comply with his obligations to the satisfaction of the rentalsman, the rentalsman may perform the obligations of the landlord.
- Section 9(3) authorizes a landlord and tenant to agree to any addition to the Standard Form of Lease as long as it does not alter any right or duty provided in the *Residential Tenancies Act* or the Standard Form of Lease.

Smoke-free Places Act

URL: www.gnb.ca/0062/acts/acts/s-09-5.htm

New Brunswick's *Smoke-free Places Act* bans smoking in indoor workplaces and enclosed public places. Smoking is also banned in a limited number of residences:

- the common areas of multi-unit residential buildings
- in that part of private home in which a business operates, provided the business has employees who do not live in the home.

Smoking is prohibited in the following “group living facilities,” except by residents in a designated smoking room that complies with the regulations:

- a facility for the long-term care of veterans
- a nursing home as defined in the *Nursing Homes Act*
- a psychiatric facility as defined in the *Mental Health Act*
- a residential facility in which approved care services are provided for adults
- an approved transition house.

Proprietors and employers are required to ensure compliance with the law; fines for failing to do so range from \$240 to \$2,620. Employers are also required to take “reasonable precautions” to minimize the exposure of employees to tobacco smoke; however, there does not appear to be any penalty for failing to do so.

NOVA SCOTIA

Residential Tenancies Act

URL: www.gov.ns.ca/legislature/legc/statutes/resident.htm

The *Residential Tenancies Act* permits a landlord to establish reasonable rules that promote the safety, comfort, and welfare of tenants and protect the landlord's property. The rules must apply to all tenants and tenants must be given a copy of the rules before signing a lease. A landlord can make changes to the rules provided tenants are given four months' notice prior to the anniversary date of their lease. Thus a landlord can restrict smoking in residential units, provided the above requirements are met. If

a no smoking clause is written into a lease and the landlord discovers that the tenant permits smoking in the rental unit, the landlord has the right to terminate the tenancy.⁵⁹

- Section 8(1) permits additional obligations and benefits to be written into the lease, provided they do not conflict with the *Residential Tenancies Act*.
- Section 9(1), Statutory Condition 1 requires the landlord “to keep the premises in a good state of repair and fit for habitation” and to comply with any law respecting standards of health, safety, or housing.
- Section 9(1), Statutory Condition 3, obliges both a landlord and tenant to conduct themselves so as not to interfere with other tenants.
- Section 9A authorizes a landlord to establish “reasonable” rules. A rule is reasonable if it promotes a fair distribution of services and facilities to the occupants of the premises or it promotes the safety, comfort, or welfare of persons working or living in the premises. Section 9A(3)(a)(ii) authorizes the landlord to change the rules of occupancy with four months’ notice.
- Section 10C allows a tenant to terminate a lease early for health reasons, where a tenant or tenant’s family member has suffered a significant deterioration in health that results in the tenant’s inability to continue the lease or where the residential premises are rendered inaccessible to the tenant. The tenant may terminate the tenancy by providing one month’s notice and the certificate of a qualified medical practitioner.

Smoke-Free Places Act, amended

URL: www.gov.ns.ca/legislature/legc/bills/59th_1st/3rd_read/b225.htm

The *Smoke-Free Places Act* bans smoking in enclosed public places and workplaces. The law also bans smoking in a limited number of residences:

- the common areas of multi-unit residential buildings, including corridors, lobbies, stairwells, elevators, escalators, eating areas, and washrooms
- provincial jails, prisons, detention centres, lock-ups, reformatories, etc.

Smoking is also prohibited in the following establishments, except by residents who are 19 years or older in designated smoking rooms that are separately ventilated and enclosed:

- health-care facilities for the acute or long-term care of veterans
- licensed nursing homes
- licensed residential care facilities
- homes for aged
- homes for disabled persons.

Managers and employers are required to ensure compliance with the Act. Penalties for failing to do so range from a maximum fine of \$2,000 for a first offence to a maximum fine of \$10,000 for a third or subsequent offence.

PRINCE EDWARD ISLAND

Rental of Residential Property Act

URL: www.gov.pe.ca/law/statutes/pdf/r-13_1.pdf

A landlord may prohibit smoking. If a no smoking clause is written into a lease and the landlord discovers that the tenant permits smoking in the rental unit, this breach of the rental agreement is grounds for the landlord to evict the tenant.⁶⁰

- Section 6, Statutory Condition.1 requires a landlord to keep the premises “in a good state of repair and fit for habitation” and to comply with any standards of health, safety, or housing.
- Section 6, Statutory Condition 3 requires a tenant and a tenant’s guests “not to interfere with the possession, occupancy or quiet enjoyment of other lessees.”
- Section 6, Statutory Condition 9 entitles a tenant to “quiet enjoyment” of the residential premises.
- If a landlord or tenant fails to comply with a legal requirement or condition of a rental agreement, Section 8 authorizes either party to make a written application to the Director to investigate the matter and issue a remedy. The Director may authorize the termination of the rental agreement or may make another order to remedy the violation.
- Section 9(4) permits a landlord and tenant to include other benefits and obligations in the rental agreement, provided they do not conflict with the *Rental of Residential Property Act* or the standard agreement.
- Section 14(1) authorizes a landlord to serve a notice of termination upon a tenant if the tenant breaches a condition of the rental agreement or if the safety or other lawful right of the landlord or other tenants has been seriously impaired by the tenant.

URL: www.gov.pe.ca/law/statutes/pdf/s-04_2.pdf?PHPSESSID=a37482661d3e6fdf84d32273b8de713e

The *Smoke-Free Places Act* bans smoking in public places and workplaces. The *Act* does not apply to common areas of multi-unit residences. Smoking in long-term care facilities, including licensed nursing homes and community care facilities, is restricted to designated smoking rooms that meet the requirements of the regulations. The owner/employer is responsible for ensuring that smoking only takes place in the designated room and that appropriate signs are posted. Penalties for failing to do so include a fine ranging from \$500 to \$2,000.

As of September 29, 2004, the smoking ban was extended to adult correctional facilities both inside the buildings and on the grounds.⁶¹

NEWFOUNDLAND AND LABRADOR

Residential Tenancies Act, 2000

URL: www.gov.nf.ca/hoa/statutes/r14-1.htm

A landlord may include a no smoking clause in a lease. If such a clause is written in the lease and a landlord discovers that a tenant allows smoking in the rental unit, the landlord may evict the tenant.⁶²

- Under Statutory Condition 1(a) a landlord is required to maintain the premises “in a good state of repair and fit for habitation” and to comply with laws respecting health, safety, and housing.
- Statutory Conditions 7(a) and 7(b) require a tenant and landlord, respectively, not to “unreasonably interfere” with the rights of the landlord or other tenants to “peaceful enjoyment” of the premises and common areas.
- Section 19(1) authorizes a tenant to terminate a rental agreement if a landlord commits a material breach of the rental agreement and fails to remedy the breach within a reasonable time after notice has been served.
- Section 19(2) authorizes a landlord to terminate a rental agreement if a tenant commits a material breach of the rental agreement and fails to remedy the breach within a reasonable time after notice has been served. Section 19(5) defines “material breach of a rental agreement” as any activity that affects the integrity or value of a tenant’s residential premises.”

- Section 20(1) authorizes a tenant to terminate the rental agreement if the landlord fails to maintain the premises in a state fit for habitation.
- Section 20(2) authorizes a landlord to terminate the rental agreement if an action of, or a failure to act by, a tenant makes a premises unfit for habitation.
- Section 22(1) authorizes a tenant to terminate the rental agreement if the landlord fails to ensure “peaceful enjoyment” of the residence.
- Section 23(1) authorizes a landlord to terminate the rental agreement if a tenant interferes with the landlord’s or another tenant’s right to “peaceful enjoyment” of the property.
- Section 35(1) permits a landlord or tenant to apply to the director to determine whether a provision of a rental agreement or the Residential Tenancies Act has been breached.
- Section 38(1) authorizes the director to investigate an application submitted under Section 35 and attempt to mediate a settlement, conduct a hearing, or issue an order.

Smoke-free Environment Act, 2005

URL: www.hoa.gov.nl.ca/hoa/statutes/s16-2.htm

The *Smoke-free Environment Act* bans smoking in all workplaces and public places. The legislation prohibits smoking in a limited number of multi-unit dwellings, since some workplaces are also residences:

- a common area of a multi-unit residential building, including a corridor, lobby, stairwell, elevator, escalator, eating area, washroom
- a provincial jail, prison, detention centre or reformatory.

Smoking by residents is permitted in the following facilities, but only in designated smoking rooms, and only under prescribed conditions:

- a facility that provides long term care, including a long term care facility located within an acute care facility
- a psychiatric facility or unit.

Employers, owners, and operators who fail to post the required signage and to ensure compliance with the law may be fined \$500-\$5000.

YUKON

Landlord and Tenant Act (Part 4 Residential Tenancies)

URL: www.gov.yk.ca/legislation/acts/late.pdf

The *Landlord and Tenant Act* does not specifically address smoking. However, if a no smoking clause is part of the tenancy agreement and all tenants in the building are treated equally, a tenant who breaks the rule by permitting smoking would be committing a substantial breach of the lease and an eviction notice would be justified.⁶³

- Section 76(1) requires a landlord to maintain the premises “in a good, safe, healthy, and tenable state of repair” and to comply with “health, safety, maintenance, and occupancy standards established by law.”
- Section 76(2) requires a tenant not to interfere “in any significant manner” with the rights of either the landlord or other tenants and not to endanger persons or property in the premises.
- Section 76(3) authorizes a landlord or tenant to apply to a judge for remedy resulting from breach of the obligations imposed by Section 76. The judge may terminate the tenancy agreement or authorize repairs.
- Section 77(1) requires that all rules respecting the tenancy agreement be disclosed in writing prior to the signing of the agreement.
- Section 77(2) authorizes a landlord to make or amend rules after a tenancy agreement has been signed, provided the rule is reasonable and intended to “promote the convenience, safety or welfare of the tenants” or “make a fair distribution of services and facilities for the general use of the tenants.”
- Section 77(3) specifies that rules made or amended under 77(2) are enforceable only if they do not substantially modify the tenancy agreement; they apply to tenants in a fair manner; they are clear; and reasonable notice in writing of the rules is given to the tenant.
- Section 79(3) authorizes a landlord or tenant to file a complaint with a rentals officer.
- A rentals officer has the authority to mediate or arbitrate any dispute (Section 80(1)) and to make any orders regarding the obligations of a landlord or tenant (Section 81(3)).
- If a tenant commits a substantial breach of the tenancy agreement, Section 93(1) authorizes a landlord to apply to a judge for an order terminating the tenancy or to terminate the tenancy by giving 14 days’ written notice. “Substantial breach” includes a breach of a tenant’s responsibility not to interfere with the rights of other tenants or the landlord, or a series of breaches of the residential tenancy agreement, the cumulative effect of which is substantial.

NORTHWEST TERRITORIES

Residential Tenancies Act

URL: www.justice.gov.nt.ca/PDF/ACTS/Residential_Tenancies.pdf

If smoking is allowed in the tenancy agreement or the agreement does not address smoking, then it is permitted in the rental unit subject to everything else. If a no smoking clause is written into the lease and a landlord discovers that a tenant permits smoking in the rental unit, the landlord may evict the tenant based on a fire insurance and safety clause.⁶⁴

- Section 12(1) authorizes a landlord and tenant to require other rights and obligations in addition to those in the tenancy agreement, provided they are not inconsistent with the Residential Tenancies Act. Sections 12(2) and (3) require the obligation to be “reasonable in all circumstances” and to be given in writing to the tenant.
- Under Section 12(4), a landlord or tenant may apply to a rental officer for a determination of whether an obligation or rule is reasonable. If the rental officer determines that the rule is reasonable, the landlord or tenant may be ordered to comply under section 12(5).
- Section 30(1) requires a landlord to maintain the premises “in a good state of repair and fit for habitation” and to ensure that the premises comply “with all health, safety and maintenance and occupancy standards required by law.”
- If, on the application of a tenant, a rental officer determines that the landlord has breached an obligation imposed by Section 30, Section 30(4) authorizes the rental officer to make an order requiring the landlord to comply; authorizing any repair or other action by the tenant to remedy the effects of the breach; requiring the landlord to compensate the tenant for loss incurred as a direct result of the breach; or terminating the tenancy.
- Sections 30(5) and 30(6), respectively, require a tenant to notify a landlord of a breach and require the landlord to remedy the situation within ten days.
- Section 34(1) prohibits a landlord from disturbing “a tenant’s possession or enjoyment” of the rental premises or residential complex.

- Under Sections 34(2) and 39(2), respectively, if a rental officer determines that a landlord has violated a tenant's right to enjoyment of the rental unit or has breached an additional obligation, the officer may require the landlord to comply with the obligation; require the landlord to compensate the tenant for loss suffered as a direct result of the breach; or terminate the tenancy.
- Section 43(1) requires a tenant not to disturb the landlord's or other tenants' "possession or enjoyment of the rental premises or residential complex."
- Under Section 43(3), if a rental officer determines that a tenant has breached the obligation not to disturb the enjoyment of other tenants or the landlord, the officer may require the tenant to comply with the obligation; require the tenant to compensate the persons affected for loss suffered as a direct result of the breach; or terminate the tenancy.
- Section 45(1) requires a tenant to comply with any additional obligations set out in writing, provided they are "reasonable in all circumstances." Under 45(4), if a rental officer determines that a tenant has breached an obligation, the rental officer may require the tenant to comply; require the tenant to compensate the landlord for loss suffered as a direct result of the breach; authorize the landlord to take action to remedy the effects of the breach; or terminate the tenancy.
- Section 68(1) requires that an application by a landlord or tenant to a rental officer be made within 6 months after the breach of an obligation.
- Section 87(1) authorizes a landlord or tenant affected by an order of a rental officer to appeal the order to a judge of the Supreme Court within 14 days of being served the order.

NUNAVUT

Residential Tenancies Act

URL: www.nucj.ca/library/consol-stat/CSNu_1999_170_Residential_Tenancies.pdf

If smoking is allowed in the tenancy agreement or the agreement does not address smoking, then it is permitted in the rental unit subject to everything else. In Public Housing units, landlords may not ban smoking. For private rentals, a landlord may include a no smoking clause. If such a clause is written into the lease and a landlord discovers that a tenant permits smoking in the rental unit, the landlord may evict the tenant. The Rental Officer reviewing the termination of the tenancy would consider whether evicting the tenant is reasonable. If the smoking were potentially interfering with other tenants' "quiet enjoyment" of their units, the tenant could be evicted.⁶⁵

- Section 12(1) authorizes a landlord and tenant to include other rights and obligations in the written tenancy agreement, such as prohibiting smoking, provided the obligations are not inconsistent with the *Residential Tenancies Act* and provided they are "reasonable in all circumstances" (Section 12(2)).
- Section 12(3) requires that any rules established by a landlord be "reasonable in all circumstances, in writing and made known to the tenant."
- Sections 12(4) and 12(5), respectively, authorize a landlord or tenant to apply to a rental officer to determine whether an obligation or rule is reasonable and authorize the rental officer to order compliance with a reasonable rule.
- Section 30(1) requires a landlord to maintain the rental premises and the residential complex "in a good state of repair and fit for habitation" and to ensure that they comply with "all health, safety and maintenance and occupancy standards required by law."
- Under Section 30(4) if a rental officer determines that a landlord has breached the obligation under Section 30, the rental officer may make an order requiring the landlord to comply with the obligation; authorizing any repair or other action; requiring the landlord to compensate the tenant for loss incurred as a direct result of the breach; or terminating the tenancy.
- Section 30(5) requires a tenant to notify the landlord of any substantial breach of the obligation imposed by Section 30(1), and Section 30(6) requires the landlord to remedy the breach within 10 days.
- Section 34(1) requires a landlord not to "disturb a tenant's possession or enjoyment of the rental premises or residential complex."
- Under Section 34(2), if a rental officer determines that a landlord has breached the tenant's right to quiet enjoyment, the rental officer may make an order requiring the landlord to comply with the obligation; requiring the landlord to compensate the tenant for loss suffered as a direct result of the breach; or terminating the tenancy.
- Section 39(1) requires a landlord to comply with any additional obligations that have been undertaken.
- Under Section 39(2) if a rental officer determines that a landlord has breached an additional obligation, the rental officer may make an order requiring the landlord to comply with the landlord's obligation; requiring the landlord to compensate the tenant for loss suffered as a direct result of the breach; authorizing the tenant to take reasonable action to remedy the effects of the breach; or terminating the tenancy.
- Section 43(1) requires a tenant not to disturb the landlord's or other tenants' "possession or enjoyment of the rental premises or residential complex."
- Under Section 43(3), if a rental officer determines that a tenant has breached the obligation not to disturb the enjoyment of others, the rental officer may make an order requiring the tenant to comply; requiring the tenant to compensate the persons affected for loss suffered as a direct result of the breach; or terminating the tenancy.

- Section 44(1) requires a landlord to investigate a complaint by a tenant that his enjoyment of the premises has been disturbed and to take appropriate action, including making an application to a rental officer. If the tenant is not satisfied with the action taken by the landlord, 44(2) authorizes the tenant to notify the rental officer.
- Section 44(3) authorizes a rental officer to attempt to resolve the complaint filed by the tenant by seeking an agreement between the landlord and the tenant who made the complaint.
- Section 45(1) requires a tenant to comply with any additional obligations agreed to as part of the tenancy agreement.
- Under Section 45(4), if a tenant has breached an additional obligation, a rental officer may make an order (a) requiring the tenant to comply; requiring the tenant to compensate the landlord for loss suffered as a direct result of the breach; authorizing action to remedy the effects of the breach or terminating the tenancy.
- Section 54(1) authorizes a landlord to terminate a tenancy on 10 days' notice if a tenant has repeatedly and unreasonably disturbed the landlord's or other tenants' possession or enjoyment of the residential complex or if a tenant has not complied with an order of a rental officer to rectify a breach of an additional obligation.

Tobacco Control Act

URL: http://action.attavik.ca/home/justice-gn/attach-en_conlaw_postdiv/consSNu2003c13.pdf

The *Tobacco Control Act* bans smoking in all workplaces and in some public places. Smoking is banned in the common area of apartments, condominiums, and all public places, whether or not a no-smoking sign is posted. Smoking is also not permitted in a three-metre radius surrounding any entrance to a public place. Anyone who contravenes these provisions is liable on summary conviction to a maximum fine of \$1,000 on a first offence and \$5,000 on a subsequent offence.

KEY STUDIES ON THE HEALTH EFFECTS OF SECOND-HAND SMOKE

The following list, with the most recent reports listed first, represents just a few of the largest and most important published reports on second-hand smoke. For a comprehensive overview of the issues regarding SHS exposure, visit the second-hand smoke section of the NSRA website (www.nsra-adnf.ca).

1. U.S. Department of Health and Human Services. *The Health Consequences of Involuntary Exposure to Tobacco Smoke: A Report of the Surgeon General*. Atlanta, GA: U.S. Department of Health and Human Services, Centers for Disease Control and Prevention, Coordinating Center for Health Promotion, National Center for Chronic Disease Prevention and Health Promotion, Office on Smoking and Health, 2006. URL: www.surgeongeneral.gov/library.

This, the most recent U.S. Surgeon General's report, provides a comprehensive review of the health effects of exposure to second-hand smoke. The report concludes that smoke-free policies are the most economic and effective approach for providing protection from SHS. Separating smokers and non-smokers, as well as the use of ventilation are simply not effective. This Surgeon General's report also comments on the issue of exposure to SHS in the home, and notes that tenants who live in MUDs have certain legal obligations and rights which make it possible for landlords and property managers to restrict or eliminate smoking.

2. Air Resources Board and Office of Environmental Health Hazard Assessment of the California Environmental Protection Agency, *Proposed Identification of Environmental Tobacco Smoke as a Toxic Air Contaminant, As Approved by the Scientific Review Panel on June 24, 2005*. URL: [ftp://ftp.arb.ca.gov/carbis/regact/ets2006/app3exe.pdf](http://ftp.arb.ca.gov/carbis/regact/ets2006/app3exe.pdf).

This report updates the findings of the 1997 report by the California Environmental Protection Agency. The report provides the scientific evidence being used by the California Environmental Protection Agency to support its case that environmental tobacco smoke be classified as a "toxic air contaminant." Under state law, a substance is classified as a "toxic air contaminant" if it can be proven that the substance "is an air pollutant which may cause or contribute to an increase in mortality, in serious illness, or which may pose a present or potential hazard to human health." After a substance is identified as a "toxic air contaminant" (TAC), the Air Resources Board prepares a report determining the appropriate degree of control of a TAC, in consultation with the local districts, affected industry, and the public.

3. International Agency for Research on Cancer (IARC), *IARC Monographs on the Evaluation of Carcinogenic Risks to Humans, Volume 83: Tobacco Smoke and Involuntary Smoking*, 2002. URL: www-cie.iarc.fr/htdocs/indexes/vol83index.html.

A scientific working group of 29 experts from 12 countries convened by the International Agency for Research on Cancer of the World Health Organization reviewed all significant published evidence related to tobacco smoking (both active and involuntary) and cancer. They looked at 58 major studies and found a 20-30% increased risk of lung cancer among non-smokers exposed to second-hand smoke.

4. Ontario Tobacco Research Unit, *Protection from Second-hand Tobacco Smoke in Ontario: A Review of the Evidence Regarding Best Practices*, 2001. URL: www.otru.org/pdf/special/special_ets_eng.pdf.

This is another excellent report that summarizes the evidence to date on the health consequences of exposure to second-hand smoke.

5. James Repace, Ichiro Kawachi, and Stanton Glantz, “Fact Sheet on Second-hand Smoke,” 1999. URL: www.repace.com/factsheet.html.

James Repace is an internationally recognized health physicist who specializes in the study of second-hand smoke. Formerly a senior scientist with the U.S. Environmental Protection Agency and now a private consultant, Repace has been called upon by many jurisdictions around the world to assist them in developing their smoke-free legislation. Repace has written and co-authored many other excellent reports on second-hand smoke and ventilation, with a focus on the hospitality industry. These reports can be found on his website at www.repace.com/reports.html.

6. Scientific Committee on Tobacco and Health, *Report of the Scientific Committee on Tobacco and Health, Part 2: Environmental Tobacco Smoke*, 1998. URL: www.archive.official-documents.co.uk/document/doh/tobacco/part-2.htm.

The Scientific Committee on Tobacco and Health (SCOTH) provides advice to the UK Medical Officer of Health on the health effects of tobacco use. This report concludes that exposure to environmental tobacco smoke is a cause of lung cancer, with the increased risk for those with long-term exposure being in the order of 20-30%.

7. U.S. Department of Health and Human Services, *The Health Consequences of Involuntary Smoking: A Report of the Surgeon General*, 1986. URL: www.cdc.gov/tobacco/sgr/sgr_1986.

This landmark report concludes that second-hand smoke causes lung cancer in adults and respiratory problems in children, and that simply separating smokers from non-smokers within the same airspace reduces, but does not eliminate, SHS exposure.

8. California Environmental Protection Agency, *Health Effects of Exposure to Environmental Tobacco Smoke*, 1997. URL: www.oehha.org/air/environmental_tobacco/finalets.html.

This report adds a number of new findings to the earlier reports by the U.S. Surgeon General and the EPA. The study concludes that exposure to second-hand smoke causes developmental problems in children including low birth weight and Sudden Infant Death Syndrome (SIDS), as well as respiratory effects including bronchitis and pneumonia, asthma induction and exacerbation, and ear infections, among other problems. As well the report concludes that in adults SHS is associated with lung cancer, nasal sinus cancer, and coronary heart disease morbidity and mortality.

9. U.S. Environmental Protection Agency, *Respiratory Health Effects of Passive Smoking: Lung Cancer and other Disorders*, 1992. URL: www.epa.gov/smokefree/pubs/etsfs.html.

This report concludes that exposure to environmental tobacco smoke (ETS) - commonly known as second-hand smoke - is responsible for approximately 3,000 deaths each year from lung cancer in non-smoking adults and impairs the respiratory health of hundreds of thousands of children.

GLOSSARY

Absorption: The process whereby a gas or liquid permeates a solid.

Adsorption: The process whereby gas molecules adhere to a solid surface.

Atherosclerosis: A process whereby the arteries harden over time, which can result in reduced blood flow and rupture of the arteries and is often the precursor to a heart attack.

COPD (Chronic Obstructive Pulmonary Disease): There is some debate regarding how COPD should be defined and what diseases should be included in the category. Most of the scientific literature includes emphysema, asthma, bronchitis, and obstructive bronchitis as a form of COPD. These illnesses typically involve chronic coughing, phlegm production, shortness of breath, and wheezing.

Cotinine: A breakdown product of nicotine that can be detected in blood, hair, urine, and saliva and can be used as a measure of exposure to tobacco smoke.

Dose-response relationship: The higher the dose of a substance, the greater the response. In the case of second-hand smoke, research has shown that the higher the dose, in terms of number of cigarettes a person is exposed to or the duration of exposure or both, the greater the risk to the person's health.

Drifting smoke: This term is used throughout this document to refer to tobacco smoke that drifts or seeps into a residential unit from various sources, including through open windows or doors from a neighbour's patio or balcony or outdoor common areas; through electrical outlets, cable or phone jacks, or ceiling fixtures; through cracks and gaps around sinks, countertops, windows, doors; and through the ventilation system.

Indoor environmental persistence: How long the chemicals in cigarette smoke persist in an indoor environment after a cigarette has been smoked.

Litigation: The process of pursuing a legal proceeding/lawsuit in a court.

Mainstream smoke (MS): The smoke exhaled by a smoker after taking a puff.

Measurable quantity: A measurable quantity of second-hand smoke means the tobacco smoke can be measured using sensitive chemical samplers, although it may no longer be perceptible to humans.

Per se violation: A legal term meaning that a particular violation is specified/named in a law or regulation.

Perceptible quantity: A perceptible amount of second-hand smoke means that the tobacco smoke can be seen or smelled.

Second-hand smoke (SHS): A complex mixture of about 4,000 chemicals, both gases and fine particles, emitted by the burning of tobacco products (sidestream smoke) and from smoke exhaled by the smoker (mainstream smoke). Also called environmental tobacco smoke or passive smoking.

Sidestream smoke (SS): The smoke emitted from the burning end of the cigarette.

Sorbency: The ability of one substance to take up or hold another, either by absorption or by adsorption (gas molecules sticking to a solid surface).

Tar: A solid residue of tobacco smoke containing the by-products of burning tobacco--sticky particles comprised of thousands of chemicals.
